- To impart knowledge and technology to budding professionals and incite their quest for further enhancement of their learning.
- To produce recognized industry-ready professionals in Electrical Engineering, through educational program incorporating practice and project based teaching-learning processes.
- To enhance knowledge in Electrical Engineering, through research for sustainable development of the society and the nation as a whole.
- To promote social, environmental and technological responsiveness related to electrical energy through dissemination of knowledge.

RECENT TECHNOLOGY TREND

Smart Grids- The nature of electricity usage is changing dramatically, especially on a consumer level. In the past, consumers relied on their local power company to provide electricity for a few dozen devices in static locations. Now, consumers have option to generate their own power by renewable energy sources (E.g. Solar PV). Surplus of which they can sell. Now loads (E.g. electric car) may not be at their fixed position.
